

Direct Laminate Veneers

SEMINAR & INDUSTRY DISPLAY

SEMINAR OBJECTIVES

- Understanding the phenomena of a smile
- The anatomical form and characteristics of natural teeth
- The nature of absorption and reflection of light falling upon a tooth
- Shade selection and why some aspects are far more important than others
- The principle components of line angles and symmetry that combine to create an attractive smile
- Tooth preparation, the last option, why it is occasionally required to achieve an aesthetic result
- Soft tissue preparation, fast and predictable techniques for gingival lifts and exudate management
- Techniques to incorporate an existing crown invisibly into a set of laminates
- Adhesion, evidence based results that shows what works and what doesn't, how to maximize the bond and minimize the staining

- Techniques for masking out discoloured teeth and stained margins
- Super efficient polychromatic layering techniques that combine the optical properties of existing teeth with composite technology to create superb aesthetics in a natural smile
- Systematic contouring techniques that set out the landmarks of a smile and provide a sequence of procedures to maximize efficiency and predictably guarantee a balanced and aesthetic smile
- Finishing and polishing techniques to mimic the reflection of light from a natural tooth

Approved by the Dental Practice Board of Victoria for 6 hours of scientific CPD credit for attending the seminar, 1 hour of scientific CPD credit for completing a single laminate and 3 hours of scientific CPD credit following the successful completion of direct laminate veneers on a patient.
